Mock Auth API

Products API

Categories API

Get Auth Token

Request

You can get a JWT authentication token by using the `/auth` endpoint. Send the email as a JSON body.

```
● ● ●                                                          Copy

[POST] https://api.bitechx.com/auth
```

```
                                                               Copy

{
    "email" : "you@example.com"
}
```

Response

```
                                                               Copy

{
    "token" : "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9..."
}
```

Authorization Header

Request

All API routes are protected and require authentication. You must include a valid JWT token in the request headers.

```
                                                               Copy

{
    "headers" : {
        "Authorization" : "Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9..."
    }
}
```
